

FYP Proposal Submission Form – FA’22 & onwards

DO NOT SUBMIT HANDWRITTEN FORM

FYP/CUI/CS-WAH/015

*** Project Title:**

(150 characters)

Web-Based Event Management and Ticket Booking System

*** Which real world problem shall be solved by this FYP?**

(800 characters)

Managing events manually is time-consuming and error prone. Organizers face difficulties in handling registrations, tracking ticket sales, and updating event details, while participants struggle with booking tickets and getting event information efficiently. The software will solve this problem by providing a web-based system where organizers can create and manage events, and users can easily view, book, and track tickets online.

Detail of Project Members:

1: CIIT/SP23-BSE-039/WAH	Muhammad Sami
2: CIIT/SP23-BSE-023/WAH	Ahmer Abbas
3: CIIT/SP23-BSE-035/WAH	Mustafa Riaz
4: CIIT/SP23-BSE-026/WAH	Naveed Umer

Supervised By:

Dr. Wasif Nisar

☐ Mobile Apps FYPs ☐ Game-based FYPs

☐ Hardware-based

*** Project Description:**

(3000 characters)

Note: Login/logout and authentication/authorization shall be the default functionalities of Web/Gaming/Mobile/Desktop FYPs.

(a) What is the overall working/summary of this FYP? (1000 characters)

Event Management and Ticket Booking System” is a web-based application. The application provides event creation, management, and booking facilities. Organizers can create and update events by adding details such as event name, date, venue, ticket price, and available seats. Users shall be able to search, view, and register for events of their choice. Each event page will display complete details along with seat availability. Users can book tickets online and receive booking confirmations through email. The application will maintain booking history for users and provide event organizers with booking reports.

(b) Write name and details of each module in your FYP.

(i) Users	(ii) Organizers	(iii) Events
(iv) Bookings	(v) Payments	(vi) Admin

1: Which module shall be developed by student-1?

(500 characters)

(i) User registration and login (online sign-up, secure login).
(ii) Search and view events.
(iii) Book tickets for events.
(iv) View booking history and others related.

2: Which module shall be developed by student-2?

(500 characters)

(i) Event creation (name, date, venue, ticket price, capacity).
(ii) Update or delete events.
(iii) Monitor bookings and seat availability.
(iv) Generate event-wise reports

3: Which module shall be developed by student-3 & 4?

(500 characters)

(i) Event listing and categorization.
(ii) Real-time ticket availability management.
(iii) Booking process (seat selection, confirmation).
(iv) Cancellation and modification of bookings.

(d) Were similar FYPs already developed on the same topic in your department?

☒ Yes ☐ No

(d-1) Copy name(s) of latest one or two similar FYPs from RMS student console and paste below. (150 characters)

(d-2) Mention below the three (3) new, but main, functionalities you are adding to this FYP. (600 characters)

1. Real-Time Seat Availability Tracking

2. Event Analytics Dashboard for Organizers

3. Event Reminder & Notification System

Development Environment:

- **Tools** (e.g.Dot Net platform, Android Studio, Xcode, Swift, Ionic, Xamarin, PhpStorm
- /Php Laravel, WordPress, Maya, Unity 3D, Photoshop, MATLAB, ns-2, Python,
- Java EE, Java ME, NetBeans, Java Script, Node.js, Angular.js, JSON, OpenCV)
- **DBMS** (e.g. SQL Server, MySQL, SQLite, Oracle, Teradata)
- **Platform** (e.g. Windows, Linux

Select tools, DBMS and platform as per above stream that you have chosen.

Tool(s) : Visual Studio Code, XAMPP, GitHub, HTML, CSS, JavaScript, Node.Js, Express Js , MS SQL Studio

DBMS : SQL (for managing users, events, and bookings data)

Platform : Web-based application developed using HTML, CSS, JavaScript, and SQL

Evaluation Criteria for 7th Semester:

(Week 14 - 16)

1. SRDS (Functional & Non-functional requirements, Use case diagram, Sequence diagram, Class diagram, Entity relationship diagram / Detailed hardware configuration)
2. Implementation of ONE major use case ($\geq 30\%$ FYP work), which does not include login/logout.
3. Interface with complete functionality of major use case / In case of hardware, provide configuration of major use case functionality.

Evaluation Criteria for Internal 8th Viva:

(Week 12 & 13)

1. Implementation of all use cases ($\geq 90\%$ FYP work)
2. Project in running and working form as per Use case, Class and Sequence diagrams as mentioned in SRDS
3. Initial FYP report
4. Deployment
 - Web: Your website must be online on any free/paid hosting service
 - Mobile App: Your app must be in APK/iOS form so that it can be installed
 - Gaming: Your game must be in executable form so that it can be installed
 - Desktop Application: Your application must be in executable form so that it can be installed
 - Hardware: Your final product must be in proper casing and should give look and feel of sellable item
